

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class InvalidLibError
    InvalidLibError --|> std_exception
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the `std::exception` class, divided into three horizontal sections. Below it is a grey box representing the `InvalidLibError` class, also divided into three horizontal sections. A blue arrow with an open triangular head points from the top section of the `InvalidLibError` box to the bottom section of the `std::exception` box, indicating that `InvalidLibError` inherits from `std::exception`.

InvalidLibError

+ InvalidLibError()  
+ ~InvalidLibError()  
+ what()
